The monthly sales review

2018-12-01 to 2018-12-30 / vs 2017-12-01 to 2017-12-30

SALES

83,030.39

-12.6%

Prior: 95,007.35 / same period

ORDERS

223

+33.5%

Prior: 167 / same period

AVERAGE ORDER

372.33

-34.6%

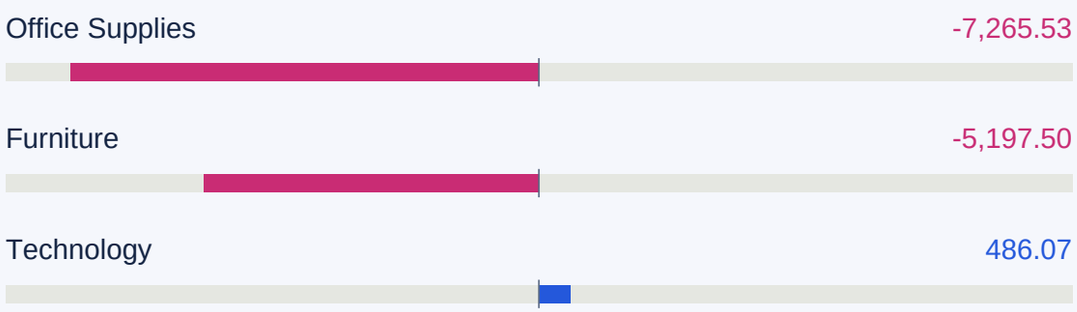
Prior: 568.91 / same period

Sales down 12.6%; 223 orders versus 167.

Order count changed +33.5%; average order value changed -34.6%. Review product mix and the ranked segment declines below.

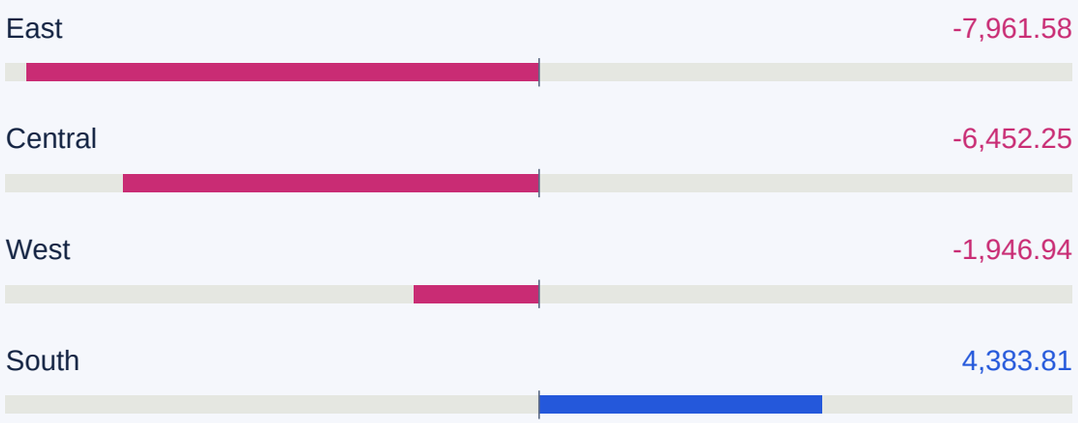
Category sales change

Change vs same period last year



Region sales change

Change vs same period last year



Read the largest declines first. Category and region are overlapping views of the same sales; their changes must not be added together.

Equal day-of-month cutoffs support comparison; they do not prove equal coverage or a certified accounting close.

From movement to a review list

01 / EXPLAIN THE TOTAL

Order-volume effect	Average-order effect	Net sales change
31,858.75	-43,835.72	-11,976.96

Volume effect = change in orders x prior average order. Average-order effect = current orders x change in average order. This bridge reconciles the sales change when averages exist; it does not establish cause.

02 / TRACE THE LARGEST DECLINES

01 **East / region** -7,961.58

More/same orders, lower sales per order | Check: FUR-CH-10002331, OFF-ST-10000142, TEC-CO-10002095

02 **Office Supplies / category** -7,265.53

More/same orders, lower sales per order | Check: OFF-BI-10000545, OFF-AP-10002945, OFF-ST-10000142

03 **Central / region** -6,452.25

More/same orders, lower sales per order | Check: OFF-BI-10000545, FUR-CH-10000454, FUR-TA-10000198

04 **Furniture / category** -5,197.50

More/same orders, lower sales per order | Check: FUR-CH-10002331, FUR-CH-10000454, FUR-TA-10001307

05 **West / region** -1,946.94

More/same orders, lower sales per order | Check: TEC-PH-10002200, FUR-TA-10001307, TEC-AC-10003870

03 / REPEAT THE REPORT

Add or replace monthly CSVs in data/incoming. Retain history. Run python refresh.py --render --pdf. A successful run publishes a new Excel, HTML, follow-up CSV and this PDF in a dated folder. Use runs/latest.json to find it. Export and import review notes before refreshing.

48 monthly files / 9,800 lines / 4,922 distinct orders. Python + SQLite validate the delivery before publishing. Excel generation requires the compatible spreadsheet runtime; --summary-only produces HTML/CSV with Python alone.
