FIELDNOTES / INTERACTIVE SALES EXPLORER

The shape of sales

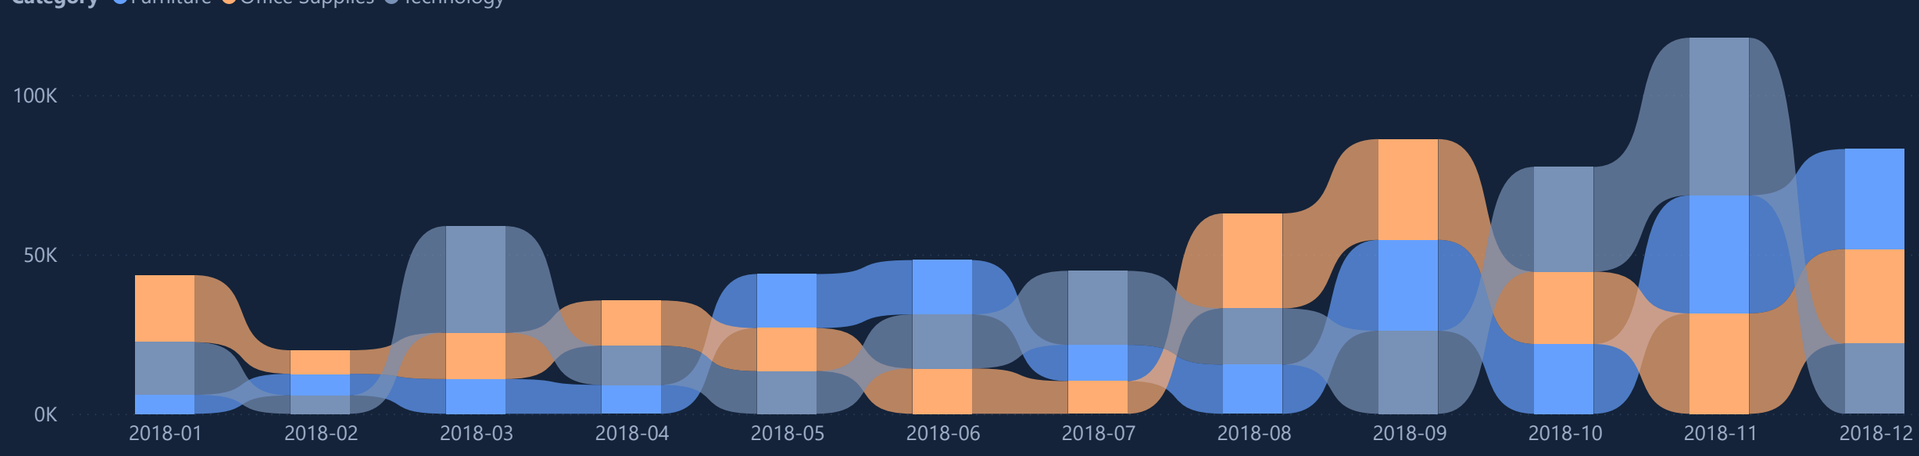

Explore the mix. Compare like-for-like periods. Follow the changes.

2018-12-01 to 2018-12-30 versus 2017-12-01 to 2017-12-30 | Historical sample; source units

Sales	Orders	Average order
83,030.39	223	372.33
vs same period last year	vs same period last year	vs same period last year
-12.6%	33.5%	-34.6%

12.6% less sales | 223 orders in the selected view

How the category mix moves | trailing 12 observed months

Hover a ribbon for amounts and rank changes. Click a category ribbon to focus the view. The report-month selector anchors the KPI comparison; the ribbon shows full observed months.

FIELDNOTES / INTERACTIVE SALES EXPLORER

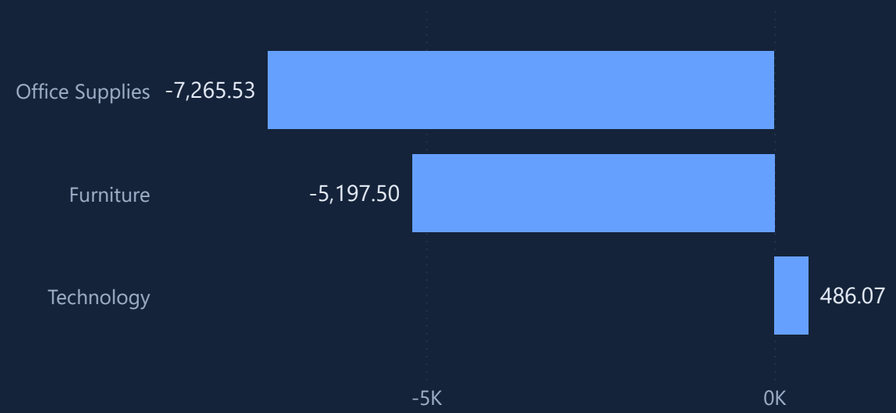

Where momentum changes

Click a category or region to filter the comparisons. Clear the selection to return.

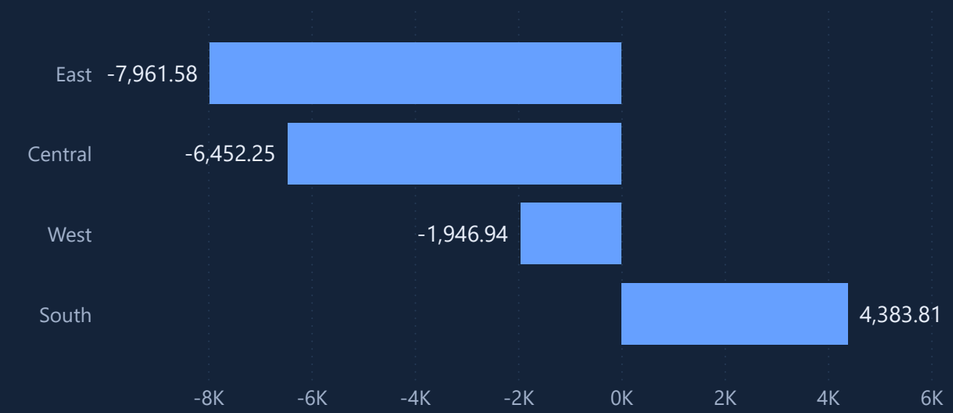

2018-12-01 to 2018-12-30 versus 2017-12-01 to 2017-12-30 | Historical sample; source units

12.6% less sales | 223 orders in the selected view

Category | change in sales

Region | change in sales

Change in order count, at prior order value

31,858.75

Change in order value, at current order count

-43,835.72

Net change in sales

-11,976.96

The arithmetic bridge reconciles the sales change; it does not establish cause. Region and category are overlapping views of the same sales and must not be added together.

FIELDNOTES / INTERACTIVE SALES EXPLORER

Behind the numbers

A repeatable local workflow, with visible coverage and source lineage.

Full-snapshot validation counts

Metric	Value
Accepted rows	9800
Input files	48
Input rows	9800
Missing monthly files	0
Skipped identical repeats	0

MATCH THE COMPARISON

One report month, common day-of-month cutoff, with region/category filters retained. The cutoff uses the global source date and does not move when filtering products. Missing prior delivery stays unavailable; an explicitly empty file is zero. Full-month ribbon values use a different time basis.

Monthly delivery coverage

REFRESH THE REPORT

1. Add or replace monthly CSVs. Retain history.
2. Run python powerbi/export_data.py.
3. Select Home > Refresh in Power BI.

Set DataFolder to your local powerbi/sample-data folder. A validated export publishes an immutable snapshot and replaces latest.json only after all tables are written. Do not export during a Desktop refresh.

SOURCE & LIMITS

Historical Kaggle Superstore sample, uploader rohitsahoo/sales-forecasting, data card GPL 2. Independent portfolio project. Sales are not profit or cash receipts. No live feed or unattended schedule is configured. Zero duplicate rows in this snapshot is an observed result, not a claimed cleanup saving.
